Routine grout maintenance does not differ from tile care. (Note: for stubborn grout stains agitation with a nylon pad or brush and a recommended cleaning solution will assist in removing of stains).

For added protection of cement based grout, a sealer may be applied according to the manufacturer's instructions. If unsure whether or not the specific tile requires sealing, stripping, and resealing, contact the tile supplier.

Rubber Tile / Rolled Rubber Floors

Lightly Soiled Surfaces

Begin by removing all surface debris, grit, sand and soil with a broom. Next vacuum the entire rubber floor with high CFM vacuum to assure of the finer dirt and grit is removed.

Note: Never use mineral spirits, paint thinners or strippers or any petroleum based product to clean the surface.

Now mop the floor. A regular string mop or a micro fiber flat mop with a mild solution of a neutral pH (7-9) cleaner can be used.

"Taski profi cleaner" or equivalent is an excellent choice for rubber but any neutral cleaner will work. Damp mop (ONLY do not flood) the surface until all visible dirt, sand and grim has been removed.

Heavily Soiled Surfaces

For heavily soiled Surfaces, remove all surface debris, grit, sand and soil with a broom and vacuum with a high CFM vacuum. If the rubber floor is especially dirty it may be necessary to hand mop some of the worst areas before beginning.

Depending on the amount of soiling, it may be necessary to clean the surface using only a hand mop or it may require using a power buffer or auto scrubber.

When using a buffer or auto scrubber, use only a mild pad or a soft nylon brush. If using a buffer, wet the area and buff only a workable area that can be completely buffed and vacuumed within 15 minutes.

Do not let the cleaning solution stand on the rubber floor for long periods of time.

After the area has been thoroughly buffed, pick up the solution with a wet / dry vacuum and repeat if necessary. For extremely heavy soils or for restorative cleaning it may be necessary to repeat the process with a more aggressive black pad in order to remove the dirt.

Once the surface is satisfactorily cleaned, rinse the surface with clean water. This can either be done with a hand mop or an auto scrubber.

Regular Maintenance

For daily cleaning, sweep or vacuum to remove all dirt and sand. If the floor is not heavily used it will only be necessary to mop periodically and it will not be necessary to mop every day. The key is to keep as much dirt and grime off of the floor and to clean up any spills quickly.
